

Real Estate Service Provider Data Sources Guide

FSBO Market Platform | Research & Aggregation Strategy | April 2026

This document catalogs websites, APIs, directories, and public records where data on real estate service providers can be sourced for the FSBO Market platform. It covers photographers, title companies, flat-fee MLS services, home stagers, real estate attorneys, and home inspectors. It also summarizes the legal landscape for data scraping and aggregation in the United States.

Contents

1. Tier 1 — Official APIs (Best Starting Points)
2. Tier 2 — Professional Association Directories
3. Tier 3 — Public Records (Lowest Legal Risk)
4. Tier 4 — Flat-Fee MLS Services (Manual Curation)
5. Cross-Cutting Data Sources
6. Data Enrichment APIs
7. Third-Party Scraping Platforms
8. Legal Landscape Summary
9. Recommended Strategy

1. Tier 1 — Official APIs (Best Starting Points)

These sources offer structured, official APIs with clear terms of use. They carry the lowest legal risk and provide the broadest coverage for our six provider categories.

Source	Covers	Data Available	API Details	Legal Risk
Google Places API (developers.google.com)	All 6 categories	Names, addresses, phone, websites, reviews, ratings, hours, photos	Yes — pay-per-call. ~\$3,600+/mo at scale. Must show Google attribution.	Low
Avvo API (avvo.com/partner_with_us/api)	Real estate attorneys	Profiles, ratings, reviews, fee structures, practice areas, hyper-local data	Yes — free API key. Partner ToS required.	Low
BBB Partner API (developer.bbb.org)	All categories	Accreditation status, A+ to F ratings, complaints, contact info	Yes — OpenAPI docs. Partner agreement required.	Low
Yelp Fusion API (yelp.com/developers)	All categories	Reviews, ratings, contact info, photos, service areas	Yes — free tier + paid plans. Cannot replicate Yelp or build competing directory.	Low (if compliant)
Thumbtack Partner API (developers.thumbtack.com)	Photographers, stagers, inspectors	Profiles, reviews, pricing, service areas, business details	Yes — OAuth 2.0. Designed for partner integrations, not data extraction.	Low

Key note on Yelp: Yelp's ToS explicitly prohibits using API data to create a competing business directory. Use it for enrichment (pulling ratings for providers you already have), not as a primary source.

2. Tier 2 — Professional Association Directories

These are authoritative niche directories maintained by professional associations. They don't offer APIs but contain high-quality, verified data. Partnership or careful scraping is the aggregation path.

Home Inspectors

Source	Data Available	Size	Aggregation Method
InterNACHI (nachi.org/certified-inspectors)	Certifications, locations, verification status, contact info	25,500+ certified inspectors	Scrape or partner. Has verification tool.
ASHI (homeinspector.org)	Member profiles, certifications, locations	Second-largest association	Scrape or partner
InspectorData (inspectordata.com)	Profiles, instant quotes, certifications, zip/city search	Large database	Claims open API — explore

Title Companies

Source	Data Available	Size	Aggregation Method
ALTA Registry (altaregistry.org)	Names, underwriter affiliations, contact info, service areas, ALTA Registry IDs	6,400+ member companies	Searchable directory. No API. Partnership recommended.

Source	Data Available	Size	Aggregation Method
HomeClosing101.org (ALTA affiliated)	Title/settlement companies by city, county, state	Regional coverage	Scrape or manual curation

Home Stagers

Source	Data Available	Size	Aggregation Method
RESA (realestatestagingassociation.com)	Certified stagers, locations, contact info, certifications	National coverage	Scrape or partner
Staging Diva Directory (stagingdivadirectoryofhomestagers.com)	Names, locations, contact info for stagers	Thousands (US + Canada)	Scrape
ASHSR Directory (directory.ashsr.org)	Certified stagers, designers, color consultants	Graduates only	Scrape or partner
HSR (homestagingresources.com)	Certified stager graduates	Resource site	Scrape

Real Estate Photographers

Source	Data Available	Size	Aggregation Method
REPAI (realestatephotographers.org)	Names, locations, portfolios, certifications, contact info	Niche directory	Scrape or partner
PPA (ppa.com)	35,000+ member photographers. Specialties, locations.	Large (filter for RE)	Partner
PFRE (photographyforrealestate.net)	Community of RE photographers, educational content	Editorial, not structured	Manual curation

Real Estate Attorneys

Source	Data Available	Size	Aggregation Method
Martindale-Hubbell (martindale.com)	1M+ lawyer/firm profiles, peer ratings, practice areas, contact	Massive database	Partnership needed. Scraping likely prohibited.
FindLaw (lawyers.findlaw.com)	1M+ firm profiles, filterable by practice area & location	Largest legal directory	No API. Structured for browsing.
Justia (justia.com/lawyers)	Attorney profiles by practice area and location	Large	Clean directory. No API.
LawInfo (lawinfo.com)	Lead Counsel Verified attorneys, practice areas	Curated	No API.

3. Tier 3 — Public Records (Lowest Legal Risk)

State licensing databases and bar association directories are public records explicitly published for public consumption. They carry the lowest legal risk for data aggregation. The main challenge is that each state maintains its own system, requiring per-state scrapers.

Source	Data Available	Notes
State licensing databases (varies by state)	Inspector licenses, title agent registrations, license numbers, names, status, addresses	Public records — strongest legal basis. Examples: myfloridalicense.com, dpor.virginia.gov, mass.gov. Requires building per-state scrapers.
State bar association directories (varies by state)	Attorney license status, disciplinary history, contact info	Every state bar maintains a public lookup. E.g., California State Bar, NY Courts Attorney Search.
ARELLO (arello.com)	4.3M+ real estate licensee records from 45 jurisdictions	Licensed agent/broker data. Useful for finding flat-fee MLS agents with active licenses.

4. Tier 4 — Flat-Fee MLS Services (Manual Curation)

The flat-fee MLS market has only ~20–30 major providers nationwide. This is small enough to curate manually. Data changes infrequently (pricing, packages), so periodic manual review is sufficient.

Major Providers

Provider	Website	Coverage
Houzeo	houzeo.com	Nationwide
ListWithFreedom	listwithfreedom.com	Nationwide (since 2005)
Beycome	beycome.com	Nationwide
Listed Simply	listedsimply.com	Nationwide
Flat Fee MLS Realty	flatfeemlsrealty.com	Nationwide
FlatFee.com	flatfee.com	AL, FL focus

Comparison / Review Sites (for research)

Source	URL	Data Available
Real Estate Witch	realestatewitch.com	Rankings, pricing, service comparisons, coverage areas
Clever Real Estate	listwithclever.com/flat-fee-mls-listing/	Reviews, pricing tiers, state-by-state coverage
Houzeo Blog	houzeo.com/blog/	State-by-state rankings, pricing, feature comparisons
HomeLight Blog	homelight.com/blog/	Industry analysis, comparison articles

5. Cross-Cutting Data Sources (Multiple Provider Types)

These general-purpose platforms cover multiple provider categories and can serve as broad data sources.

Platform	Covers	API?	Key Restrictions
Houzz (houzz.com/professionals)	Photographers, stagers, designers	No official API	Third-party scrapers exist (Apify). ToS likely prohibits scraping. Rich portfolio data.
Angi (formerly HomeAdvisor) (angi.com)	Inspectors, photographers, stagers	Limited (lead delivery only)	100K+ provider profiles. Third-party scrapers violate ToS.
Zillow Media Experts (zillow.com/professionals)	Photographers	Partner API (property data only)	Explicitly prohibits scraping. Would need partnership.

6. Data Enrichment APIs

Use these to supplement provider records you've already collected from primary sources — filling in missing contact details, social profiles, and company metadata.

Service	Purpose	Pricing
Apollo.io (docs.apollo.io)	Contact enrichment: emails, social profiles, company data, phone numbers	Free tier; \$59+/user/month for paid plans
Clearbit (HubSpot Breeze) (clearbit.com)	Company/person enrichment from domains and emails	Now bundled with HubSpot pricing
DataForSEO (dataforseo.com)	Google My Business data extraction, business data API	Pay-per-call
Outscraper (outscraper.com)	Google Maps data extraction at scale	Pay-per-result
ZoomInfo (zoominfo.com)	Enterprise business contact database	Enterprise pricing (expensive)
Unified.to (unified.to)	Single API wrapping 25+ enrichment providers	Varies by provider

Real Estate-Specific Data Providers

Service	What It Offers	Notes
ATTOM Data (attomdata.com)	158M US properties; bulk data licensing; API access	Property data, not service provider directories
BatchData (batchdata.io)	Property/owner data API; 150M+ properties; no contracts	Good for property enrichment, not provider data
First American D&A; (dna.firstam.com/api)	Property data API; title-adjacent data	Complementary to title company data
Datarade Marketplace (datarade.ai)	Marketplace to find/compare 500+ data providers	Good for discovering niche data sources

Important gap: These real estate data providers focus on property data and agent/broker data, not on photographers, stagers, inspectors, or title companies. No single provider aggregates all six service categories. This fragmentation is actually our

competitive opportunity.

7. Third-Party Scraping Platforms

If official APIs and partnerships don't provide sufficient data, these platforms can extract data from public-facing websites. They shift some liability but do not eliminate it.

Platform	What It Does	Pricing
Bright Data (brightdata.com)	Proxy infrastructure + pre-built datasets + scraper API	From \$4/GB
Apify (apify.com)	Pre-built scrapers for Yelp, Houzz, Thumbtack, BBB, Angi	Pay-per-use
ScrapingBee (scrapingbee.com)	Scraper API with pre-built scrapers for major sites	From \$49/month
Outscraper (outscraper.com)	Google Maps data extraction at scale	Pay-per-result
DataForSEO (dataforseo.com)	Business data API (Google My Business data)	Pay-per-call

8. Legal Landscape Summary

Key Court Rulings

hiQ Labs v. LinkedIn (Ninth Circuit, reaffirmed 2022) — The court held that scraping publicly accessible data (no login required) generally does not violate the Computer Fraud and Abuse Act (CFAA). The Supreme Court vacated and remanded based on *Van Buren v. US*, but the Ninth Circuit reaffirmed. The case settled with hiQ paying \$500K.

Meta v. Bright Data (2024) — Confirmed that scraping content behind contractual restrictions (Terms of Service) may constitute breach of contract, even when data appears publicly accessible. ToS violations alone are not CFAA violations but can be breach of contract.

Key takeaway: Scraping publicly available data is generally not a criminal CFAA violation, but it can still expose you to: breach of contract claims (if you agreed to ToS), copyright infringement (for review text, photos), trespass to chattels (if scraping burdens servers), and state privacy law violations (CCPA).

Privacy Considerations

CCPA (California Consumer Privacy Act) — Applies to California residents' personal info regardless of how collected. If aggregating CA-based provider data, you must provide transparency, honor opt-out requests, and implement reasonable security. Business contact info in a business context has some protections but is less restricted than consumer personal data.

Legal Risk Assessment by Source Type

Data Source Type	Legal Risk	Basis / Notes
State licensing databases	LOW	Public records; explicitly published for public access. Strongest legal basis.
Official APIs (Google, Yelp, Avvo, BBB)	LOW	Using official API within documented terms of service.
Professional associations (ASHI, RESA, ALTA)	LOW-MEDIUM	Published for public discovery; check individual ToS. Partnership preferred.
Buying bulk data (Bright Data, Apify)	MEDIUM	Shifts some liability to provider but does not eliminate it.
Scraping Yelp / Houzz / Thumbtack directly	HIGH	Explicit ToS prohibitions; copyright on reviews and photos.
Scraping Zillow	HIGH	Explicit ToS prohibitions; Zillow actively enforces against scrapers.

9. Recommended Strategy

Based on the full research, here is the recommended phased approach for building our provider data layer:

Phase 1 — Start Here (Legal, Structured, API-Based)

- **Google Places API** for broad coverage across all 6 categories — most data, best structured, official API
- **Avvo API** for real estate attorneys specifically
- **BBB API** for trust/verification signals across all categories
- **State licensing databases** for inspectors and attorneys (public records, lowest legal risk)

- **ALTA Registry** for title companies (may need partnership)

Phase 2 — Manual Curation + Partnerships

- **Flat-fee MLS services:** small enough market to curate manually (~20–30 providers)
- **Professional association directories** (RESA, InterNACHI, ASHI, PPA): reach out for data partnerships or manually curate
- **InspectorData API:** explore their open API offering for inspector data

Phase 3 — Enrichment Layer

- **Apollo.io or Clearbit** to enrich provider records with additional contact data, social profiles, company info
- **Yelp API** (within terms) to pull ratings/review counts for providers you already have — use as enrichment, not primary source

Phase 4 — Avoid or Use Cautiously

- Scraping Yelp, Houzz, Zillow, Thumbtack, Angi directly — high legal risk, ToS violations
- Third-party scraping services (Apify, Bright Data pre-built scrapers) for these platforms — shifts but does not eliminate liability

Competitive Insight: The biggest gap in the market is that no single API or data provider offers a comprehensive directory of real estate service professionals (photographers, stagers, inspectors, etc.). The data is fragmented across dozens of niche directories, professional associations, and general business platforms. This fragmentation is our opportunity — building this aggregation layer *is* the competitive moat for FSBO Market.
